DIRECT CONNECTIONS TO THE **WORLDWIDE** INTERNET from

**£10+VAT  
PER MONTH**

## What is the Internet?

**T**HE INTERNET is a massive wide area network of networks that comprises many thousands of machines and networks around the world. The majority of these networks consist of high speed leased lines. Networks on the Internet communicate using Transmission Control Protocol/Internet Protocol or TCP/IP.

TCP/IP is a proven, robust set of hardware independent networking protocols. There is a number of interesting and standard applications that use it including *telnet*, *ftp*, *gopher*, *www*, *waits etc..* *telnet* allows you to log in to any computer (where you have permission) on the Internet from any other computer on the Internet. *ftp* allows files to be transferred between Internet connected machines. There are also TCP/IP protocols for transferring mail and network news (usenet). Connecting to Demon Internet over a telephone line requires SLIP (Serial Line Internet Protocol) or PPP (Point to Point Protocol). Don't worry if you don't know what these are - we have free software (and advice!) for a wide range of computers.

## How Would I Use these Applications?

There is an enormous number of excellent free or shareware programs available in publicly accessible archives on the Internet. With *ftp*, you can get hold of these programs quickly and cheaply. With our service you can download a file directly to your computer whenever you want.

*Telnet* allows you to connect through the internet, over any distance, and act as if you are a terminal plugged directly into a computer with a wire and able to use it. When using services on the Internet you will often be using *telnet*. You may find *telnet* useful for connecting to other people's machines for business reasons. For example, a software developer could install and maintain applications remotely. The Internet is a readymade network for people who don't want to design and run a network - they simply want to use one.

## Demon Internet v BBS Internet access

The Demon Internet service offers full Internet access. You may have seen details of services such as bulletin boards offering Internet access. The main advantages of our system over these are:

- 'Internet Access'. BBS access may mean only indirect mail and news - we offer a true direct connection via multiple leased lines to multiple Internet connection points.
- File transfer directly to and from your computer - downloading with BBS systems requires you to ftp to the BBS first and then download to your computer. Uploading encounters the same problem only in reverse.
- You can have multiple processes eg. send/receive mail and news, telnet and ftp all at the same time - with BBS systems you can only do one thing at a time.
- You have unlimited mail boxes - with BBS systems you normally only get one.
- With a BBS connection you cannot take advantage of the powerful new graphical Internet browsing and information retrieval tools such as those for the World Wide Web.

## How do I connect to the Internet?

Connecting to the Internet through Demon Internet is easy. You don't need a network adapter. TCP/IP is completely independent of the underlying network hardware. It works just as well on a 14,400 bps serial link as on a 10 Mbps Ethernet link - the only difference being speed.

The Demon Internet network is connected via multiple leased lines. You can dial in to any of our PoPs and connect to the Demon Internet gateway using TCP/IP software and become part of the Internet network. You may already have software on your computer to enable you to connect. If not, we have a growing archive of excellent Public Domain and Shareware software available on our machine. This software will allow you to *ftp* and *telnet* from your desktop.

## ⇒ | How easy is it to Use?

An example of connecting to our service from a PC, sending your mail and news postings, collecting any new mail and news, connecting to a file server in Virginia, USA and downloading a document file would be:

### **demon**

Connect to the Demon Internet service

### **ftp ftp.uu.net**

File server in USA

### **anonymous**

Enter a login name of anonymous

### **[optional password]**

Normally your email address

### **dir**

To see the files - you can change directories etc.

### **get README**

Download the file README to your local hard disk

### **quit**

Logoff from USA

### **exit**

Logoff from Demon Internet - now on your local machine only

### **type README**

If you don't believe what you've just done!

Whilst this is happening your email and news are being uploaded and downloaded in background. You can in fact be logged on to several different sites at the same time. So to access an information gopher in Sweden at the same time as the above, whilst connected, type: telnet gopher.sunet.se. Actual commands will vary from computer to computer - you may be using Microsoft Windows, Apple Macintosh or X-Windows software as well as 'traditional' DOS software. The PC programs we have available offer an easy to use front end configuration and management program which means you can comfortably set up a new installation in less than 20 minutes. This can run on the lowest power IBM compatible.

Alternatively you can set up a Windows front end - join in the support news groups and share your experiences with others.

## ⇒ | Usenet News

Usenet is the set of machines that exchange articles tagged with one or more universally recognised labels, called newsgroups (or "groups" for short). The articles consist of discussions and files on a vast array of topics. It is the world's largest conferencing system with an estimated 20,000,000 readers at 80,000 sites worldwide.

We collect all the newsgroups we can, currently over 10,000, and allow you to download the ones you want to read. You can post your own contributions. Some newsgroups are UK only whilst others are contributed to by people the world over.

Usenet encompasses government agencies, large universities, high schools, businesses of all sizes, home computers of all descriptions etc.

Usenet is not an organisation, not a democracy, not a commercial network. It runs independently of networks; i.e. not just on the Internet.

### **The major categories are:**

#### **'comp'**

Topics of interest to both computer professionals and hobbyists, including topics in computer science, software sources and information on hardware and software systems.

#### **'misc'**

Miscellaneous - including fitness, job-hunting, law, investments etc

#### **'sci'**

Discussions marked by special knowledge relating to research in or application of the established sciences.

#### **'soc'**

Social issues and socialising.

#### **'talk'**

Debate oriented feature long discussions on any subject often without resolution.

#### **'news'**

News network, group maintenance and software.

#### **'rec'**

Hobby and recreational groups.

#### **'alt'**

Alternative groups - anything and everything.

## ⇒ | Electronic Mail

Perhaps the fastest way of communicating with someone or some people, short of normal conversation, is by electronic mail (or email). You can send and receive mail to and from anywhere in the world. Through Demon Internet mail can arrive at its destination in seconds. Mail works around your email address which provides all of the information required to get a message to you from anywhere in the world. The recipient of your mail doesn't have to be a Demon Internet customer. An address doesn't have to belong to a human being; it could be a list of people, a file server or even someone's pocket pager.

With Demon Internet you can have multiple mailboxes eg.

**fred@yourmc.demon.co.uk**

and **john@yourmc.demon.co.uk**

where **yourmc** is the nodename of your choice.

Alternatively you could become

**yourco.com**

or

**yourco.co.uk**

or similar using our **Mail Forwarding** option - see opposite page.

## ➡ | Service Options

### GENERAL:

All our services provide a direct connection to the internet, a full read write Usenet news feed, multiple mail addresses, unlimited on-line time and no volume usage charges.

All services are available to corporate and home users. Apart from the Mail Forwarding service which is annual only, all contracts have a minimum subscription period of just one month.

You will need to set up a SLIP or PPP connection to us. We can advise on the best software to use and you will more than likely be able to download suitable Public Domain or Shareware software using our guest account.

We have over 300 lines for dial-up usage around the U.K. and these have at least V.32bis/V.42bis modems at 14,400bps. You may connect to us at lower speeds to a minimum of 2,400. V.Fast 28,800 coming soon.

*Please see the separate sheet for the latest low prices on high speed modems. There is a separate sheet offering specialised books.*

The Demon Internet NOC (Network Operations Centre) has its own private international leased line to the United States, lines to other network providers for excellent UK coverage, a line to the Department of Computing Imperial College for their extensive archive facilities and lines to our PoPs.

Demon Internet are full members of the CIX, the Commercial Internet Exchange, and so offer full commercial connectivity to their associated networks. We have our own domains (demon.net and demon.co.uk), a Class B internet address and autonomous system number.

Our service has enjoyed availability in excess of 99% since its introduction on 1st June 1992 and we now have over 12,000 subscribers. See the When You Join section for details of our extensive

support system. The service is run on a selection of Sun and Apricot Unix boxes - all running TCP/IP of course. Our Usenet news feed takes all of the groups offered to it and news flows in at the rate of about 80Mb per day. We currently store at least the last 10 days of all groups.

No service or part service may be sold or passed on, including within your own organisation, without the written consent of Demon Internet Ltd. All payments are due to Demon Internet Ltd in advance of using any service. All prices exclude VAT.

### STANDARD DIAL UP:

Full Internet service details as detailed above in General (ftp, news, mail etc.) but mail must be processed on your single computer connected to us. All outgoing mail and news must be composed on this one computer.

This means it must not be passed on round a network or to a remote site for processing. You choose a nodename to call your computer between 4 and 8 characters (e.g. yourmc) and then can have multiple user names at that address (as in Electronic Mail above).

This service costs just £12.50 to join and £10.00 per month both + VAT. Companies requiring a VAT receipt are requested to join annually costing £132.50 + VAT = £155.68.

You may pay by Visa, Access or Mastercard credit cards or cheque. Please enclose payment with your order.

If taking a Standard Dial-Up service paid monthly by Credit Card, please note that no receipt is issued and you are debited on the first of each month except for the month of joining.

If taking a Standard Dial-Up connection annually, you may cancel this at any time by given written notice in advance and the number of whole months remaining will be credited. Please contact us should you wish to make alternative payment arrangements.

We have a mail rewrite service costing £50 per year to allow mail to your Demon Internet account to be permanently or temporarily sent elsewhere. This is useful for travellers and multiple

sited companies. Please contact us to discuss your particular requirements.

### MAIL FORWARDING:

An extension to the Standard Dialup account, ideal for the Business user who wants to have a company email address. In addition to your Demon account, you choose a domain name (e.g. acme.co.uk or gorilla.com), we register the domain for you, and then all mail for that domain is forwarded to your Standard Dialup account. We can also liaise with other networks to obtain subdomains of existing company domains.

In addition, you can also forward mail for your domain around a local area network. For mail systems such as MS Mail, you may require some form of SMTP Gateway software.

Very short names (3 or less characters) are normally only registered in exceptional circumstances. Some domains and comments:

#### .co.uk

Company, United Kingdom. Applications are put to the Naming Committee, on which we sit, and if not opposed within 5 working days, the name is delegated. The whole process should therefore take a maximum of 10 working days. The name should reflect your Company name. E.g. Acme Ltd. should ask for acme.co.uk. Ask us for advice if in doubt.

#### .com

Commercial. No geographic location is implied by it and lots of UK companies use a .com mail address. A form has to be filled out (by us) and submitted to the Internic who can take up to 6 weeks to process applications. The name doesn't have to reflect your Company name.

#### .org

For organisations rather than private companies. Details as per .com

#### .org.uk

Description as per .org but specifically for the UK and the allocation process is the same as .co.uk.

This service costs £200 per annum in addition to the Standard Dial Up. It does not enable you to use the Internet from multiple hosts around your network.

## ➡ | Network Connections:

Put your whole network, up to 253 computers, onto the Internet via dial up reserved line, 14.4K or 64K leased line. All network connections include use of your own domain name and thus are not subject to the Mail Forwarding charge. If you already have your own Class C internet address we can route to that or we will register one on your behalf. You may connect to our London or Edinburgh Points of Presence.

We can recommend and supply suitable routers and advise on software. We will arrange the installation of leased lines on your behalf, however all BT installation and line costs must be met by you, except for the 64K leased lines.

### NETWORK DIAL UP,

reserved line (NDRL):

A dedicated phone number and modem (V.32bis/V.42bis) at our Network Operations Centre in Finchley. Additionally, the option to have us connect to you to allow incoming connections - any BT charges will be invoiced back to you. You can use your own domain and connect your entire network through one dialup connection. Setup £750, £100 monthly charge. Domain and IP Address registrations included.

### 14.4K LEASED LINE:

A leased line with a V.32bis/V.42bis modem at each end - the modem at your end is supplied on a free rental basis by us. Setup £1,000. Monthly charge £200.

### 64K LEASED LINE:

A 64K leased line for maximum throughput. Setup £1,000. Monthly charge £500 Central London, £600 elsewhere, including the rental of the line.

*Leased line options include 24 hour support.*

*Ask for our comprehensive Leased Line information pack.*

## ➡ | When You Join

| Saturday           | 10.00 to 12.30 |                               | 14.00 to 17.00 |

excluding Bank Holidays.

We also have a 24 hour emergency pager service to report any problems with our service. Please do not call the pager for technical support.

If using the pager, please leave your name, node name, a description of the fault and a contact number if you wish to be contacted. Messages leaving out any of the above will be

ignored. Leased line customers may use the support line or pager at any time.

We can send certain software to you on disk, for example for the PC, and we make a small copying charge of £7.50+VAT for this service. Alternatively, we have a download account from which you can download files for your PC, Amiga, Mac, NeXT, Sun, UNIX box etc., using a standard communications package (8 bits, no parity, 1 stop bit).

Please ask us for the guest account password of the day, after you have joined, as it changes at 9am daily except for weekends. Logon and type guest at the login: prompt and then enter the password. Follow the instructions on the screen - you may download using X, Y or Z-Modem (or Kermit). Please note that you are logging on to a UNIX box and that case is sensitive - your login should be done using lowercase letters.

If downloading software for MSDOS, put the downloaded file (DlSnnna.EXE) in its own subdirectory and run it. It will extract a selection of files including README.IST - read that file and follow the instructions.

To discover your unique internet address and set up your password, log in using a standard communications package (8 bits, no parity, 1 stop bit).

At the login prompt enter your host name (e.g. yourmc if you have chosen to be yourmc.demon.co.uk). If you get asked to enter a password at this stage it means your account has not been set up - please contact us. Otherwise it should automatically take you into the password selection program.

Following this you will be given your internet address. Disconnect the line and configure your software with your password and Internet address and you can then log on properly.

Please make sure you download the installation text files using our download account - these are in /pub/doc. You will receive a letter from us confirming that your account has been set up. All necessary information is available from our servers.

**The support mail address** is internet@demon.net.

**Support newsgroups include:** demon.announce, demon.ip.support, demon.ip.support.pc, demon.ip.support.pc.mac, demon.ip.support.unix, demon.ip.support.archimedes, demon.ip.support.amiga, demon.ip.support.atari, demon.ip.support.other.

Other demon groups include demon.adverts, demon.local, demon.ip.winsock and demon.ip.www.

## ⇒ | Some free services on the Internet

- ***These are some of the services available to anyone on the Internet, for free, without formality:***

Access to Internet resources, Electronic Publishing Service

Access to Library of Congress and nation-wide libraries.

Access to nearly every listed internet service and library.

Agricultural info (livestock reports, etc.)

American Mathematics Society sponsored bbs with software and reviews.

Archie (archive finder) access to help you search for files telnet  
archie.doc.ic.ac.uk

ASCII files of Supreme Court rulings in directory /hermes BBS  
for APA.

BBS for HP Calculator users, with chat mode.

City/State forecasts, ski conditions, earthquake reports, etc.

Compressed/tar'd list of net resources in /resource-  
guide.txt.tar.Z

Convers. Hypertext Access Tech.

Copy of Library of Congress. (all 10 Terabytes of it !)

Daily press releases from NASA.

Dictionary, thesaurus, CIA world fact book, quotations database.

Divine Comedy and reviews.

Free account, with access to various UNIX features.

Gopher Servers – menu aided searching programs.  
telnet gopher.sunet.se

Graphics bibliography.

Genetic database

Info by city or area code (Population, Lat./Long., Elevation, etc).  
info. on scholarships, minority assistance, etc.

InterNIC Registration Services Center - WHOIS, GOPHER,  
WAIS etc. telnet rs.internic.net

Information System for Advanced Academic Computing, for  
IBM users.

Internet anonymous FTP database.

Internet Relay Chat access, like a CB on the computer.

Law libraries and legal research.

Library of software, links to other libraries.

List of interest groups/email lists in /netinfo/interest-groups.

Lists of rare live recordings, cd's for sale.

Lyrics(/pub/music/lyrics/files) in text files for anonymous ftp.

Many docs, including 5 purity tests, the Bible, Dec. of Ind.

Meteorological Info from the UK - satellite pictures  
ftp cumulus.met.ed.ac.uk

Minority Online Information Service.

NASA Headline News finger nasanews@space.mit.edu

National ham radio call – sign callbook.

Navigational/Time/Astronomical information.

Online database, book reviews, magazine fax delivery service.

Play/watch real-time chess, backgammon etc. with human  
opponents.

Programs, Datasets, etc. for statisticians.

Recent Earthquake info (location, time, magnitude, etc.)

Resources on Geology, Geophysics, Astronomy, Astrophysics.

Science Technology Information System.

SW Research Data Display Analysis Centre.

The Usenet Oracle!

USA Today Headline News, Sports, etc...

Wide Area Information Service.

... and more

... and more

... and more.

**We have our own IRC and WWW servers.**

*[Source: occasional net posting on Usenet group alt.bbs.internet. Site information  
correct as at 01/01/94 ]*

**INTERNET  
from  
DEMON**

## Frequently asked questions

### **Q Are there any usage or online charges to use your Services?**

**A** No. You only pay the fixed amounts as per our price list. You will have to pay the telephone charges between you and the Point of Presence to which you connect in the normal way.

### **Q Will I incur any extra telephone charges or any charges at all even if I connect to foreign countries?**

**A** No. You only pay for the standard telephone charges no matter where you are connecting to once online. There are services on the Internet that charge for usage but these are few and far between. You can't accidentally use these services. Any payment details given to us are held in total confidence and not passed on to third parties for any reason whatsoever.

### **Q How is it possible for this Service to be viable to Demon Internet?**

**A** We take leased (fixed, open) lines between ourselves and other Internet providers. For instance, one of our main ones is to SprintLink in Washington, USA. We pay a fixed price for the leased line and a fixed price to SprintLink for them to pass on access through our line to the Internet. We are not charged depending on usage and so are able to offer a fixed price service.

### **Q I understand the answer to the previous question, but how can your basic service be just £10 per month? This seems too cheap!**

**A** We have a policy of providing a small number of services very well. By concentrating on these matters we are able to

provide a very keenly priced service. The take up and leaving rates of Customers indicate to us that we are achieving our targets. The service has been running since June 1992 and well over 500 people per month are joining.

### **Q How long will it take to set up my account?**

**A** Your Standard Dial Up account is set up the same day we receive your application, often within an hour. Incoming mail takes a day before it can be received as the Domain Name System gets updated daily and then propagates around the world.

### **Q If mail arrives for me when I am not connected, what happens?**

**A** We hold the mail on our computers until you next connect when it is automatically delivered to you.

### **Q Can I receive mail for more than one person if I take a Standard Dial Up account?**

**A** Yes. You don't need to tell us the recipient's mail addresses as you will configure these on your computer. We just need you to decide on a 4-8 character nodename which will form the first part of your mail address.

### **Q I have a UNIX system and we are already running TCP/IP around the network. We invented the Class C address we are using. Does this matter?**

**A** It only matters if you are taking a Networked Service from us (Network dial up or Leased Line). For a Standard Dial Up account you are allocated just one address out of our Class B

address. You will assign this address to your serial interface. You may not have realised that Internet Address (IP addresses) such as 158.152.12.34 are actually assigned to interfaces and not computers. We will only route packets to the Class B address assigned to you under a Standard Dial Up account. If taking a Network Service, then you can use your existing registered Class C address. If you don't have a registered Class C address then we will allocate one from our block of Class C's. This helps in efficient usage of the IP address namespace and is called Supernetting.

### **Q I don't have a registered Class C address. I want to configure my network ready to go onto the Internet but only want a Standard Dial Up service in the interim. Can you still register a Class C address and what is the cost?**

**A** We can register a Class C address for you - we will allocate one out of our block in readiness for you taking a Network connection from us later. This will put you under no obligation whatsoever. We make no charge for this Service.

### **Q If I like the service, can I encourage my friends to join? I know the answer of course but wish to know how Demon Internet are coping with the current and expected take up of their Services.**

**A** One of the most common reasons for people joining our service is recommendation and we are very pleased about this. The service started with just one computer and 8 telephone lines. Now we have over 15 hosts, 9 Points of Presence (PoPs), thousands of users and hundreds of phone lines. We have exciting plans to improve the service in a

number of areas over the coming months with improved connectivity, faster access, more phone lines, more PoPs etc. We realise that investment in our resources is essential and have a carefully worked out strategy.

### **Q Is Demon Internet an Independent service provider? Is it linked to other UK Internet Providers?**

**A** Yes to both questions. We take our main feed from SprintLink in Washington, are full members of The Commercial Internet Exchange in the USA, and own all our equipment and leased lines to our PoPs. This means we have maximum control over the business and can plan for the future with confidence. We peer (exchange Internet traffic with) the only two other UK independent commercial Internet providers (EUnet GB and Pipex). This provides our respective Customers with excellent access to other UK Internet hosts.

### **Q Do Demon Internet provide other services?**

**A** Yes, we have a POP3 Mail Service, Mail Rewriting, World Wide Web information layout, server space and consultancy service.

Call us for more details.

### **Q I am interested in taking a leased line service - is there any further information I can get?**

**A** Yes. Contact us and ask for our Leased Line information pack which provides much more specific details for customers interested in these services.

# Application form and price list (excluding VAT)

• REMEMBER - THERE ARE NO USAGE CHARGES

| Service                               | Initial Charge | Monthly Charge | or  | Annual Charge |
